RUTUL DESAI

rutul.desai@outlook.com | desairutul.github.io

SUMMARY

Supply chain data analyst targeting analytics engineering on the Microsoft data stack (Power BI). Builds end-to-end SQL/Python data pipelines, SQL data models, and Power BI reports and semantic models for planning and logistics teams, cutting processing time up to 95% and improving metric accuracy up to 70%.

CORE SKILLS

- Microsoft Data Platform: Power BI (semantic models, DAX, Power Query/M), Power Automate, Microsoft SQL Server
- Data Pipelines: End-to-end SQL/Python (Pandas, NumPy) pipelines (ingest, transform, model, serve); Airflow orchestration; Dockerized tools
- SQL Data Modeling & Warehousing: ClickHouse, MySQL, GCP; composite data models over large multi-source datasets
- Supply Chain Analytics: Multi-tier flow visibility, inbound/outbound reconciliation, inventory/replenishment metrics, demand forecasting
- Methods & Tools: Statistical forecasting/regression, correlation and root-cause analysis, Lean/5S; Tableau; JIRA, Slack with ops stakeholders

PROFESSIONAL EXPERIENCE

Supply Chain Analyst — A&M Retail Ventures LLC | Kirkland, WA | Jun 2026 – Present

- Built 2 end-to-end Python data pipelines that cut processing time from 1 hour to under 3 minutes for recurring supply chain reporting.
- Developed Python demand forecasting models that improved purchasing by 20% and aligned orders with expected demand.
- Increased inventory turnover by 25% by applying forecast insights to stock and replenishment planning.
- Built a Power BI report and semantic model that gives stakeholders clear visibility into supply chain performance and forecast results.

Operational Analyst — Radiant Global Logistics | Seattle, WA | Jul 2025 – May 2026

- Engineered end-to-end SQL/Python data pipelines (ingest, transform, load) feeding a live composite data model (ClickHouse; GCP), replacing Excel with real-time Power BI reporting on logistics flow metrics for planning stakeholders.
- Automated extract, transform, load, and reporting with 4 Python pipelines and 2 Dockerized/executable tools, cutting end-to-end runtime from 5 hours to 10 minutes (95%) for daily operational workflows.
- Modeled and aggregated 4 large-scale datasets in SQL to surface exceptions, trends, and actionable insights; delivered Tableau-ready analysis patterns and automated dashboards for self-service analytics.
- Raised inflow/outflow KPI accuracy 70% via data quality fixes to metric definitions/joins in the KPI layer; tracked fixes with ops in JIRA/Slack.
- Enabled planning stakeholders with concise recommendations from complex logistics data, improving planning visibility and decision speed.

Data Analyst — University of Washington | Seattle, WA | Oct 2024 – Jun 2025

- Built and deployed a linear regression model forecasting demand/price thresholds; recommendations lifted departmental revenue 35%.
- Used SQL-scale analysis and Tableau visualizations on large purchasing datasets to recommend dynamic pricing strategies.
- Presented findings clearly to stakeholders and streamlined recurring reporting/analysis workflows.

Produce Supervisor — Whole Foods Market | Vancouver, BC | Mar 2023 – May 2024

- Orchestrated end-to-end procurement, inventory replenishment pipelines, and vendor coordination for local and overseas suppliers.
- Used real-time inventory metrics to drive purchasing decisions and improve inventory turnover in a high-volume operations environment.
- Supervised and trained cross-functional team members to keep daily front- and back-of-house operations reliable under high volume.

INTERNSHIPS

Inventory Analyst (Co-op) — Walmart Inc. | Toronto, ON | May 2022 – Aug 2022

- Executed deep-dive correlation analyses to isolate process bottlenecks across inventory and operations workflows.
- Captured $1.2M+ in annualized savings by translating analysis findings into targeted process corrections.
- Introduced and championed Lean 5S methodology to remove process clutter, enabling frontline tasks to run ~40% faster.

Operations Analyst (Co-op) — Walmart Inc. | Toronto, ON | Sep 2021 – Dec 2021

- Modeled historical operational trends to remediate performance gaps, delivering $1M+ annualized savings.
- Deployed validation logic that flagged systemic product misclassifications, protecting margins from up to 90% unit-revenue loss.
- Engineered an audit and reporting method that cut inventory counting cycles ~20–30% and reduced department shrink (up to 87% in scope).

EDUCATION

University of Washington — M.S. in Supply Chain Management (2024 – 2025)

George Brown College, Toronto — Advanced Diploma in Supply Chain & Operations Management, specialization in Business Administration (2020 – 2022)

Gujarat Technological University — B.E. in Mechanical Engineering (2014 – 2018)

CERTIFICATIONS

Certified Lean Six Sigma Green Belt — University of Washington (Jun 2025)
